

Adilet Kudashov

Junior AI / Backend Engineer

Python • FastAPI • LLM • RAG • REST API

Astana, Kazakhstan | +7 705 389 9676 | sk1petheking@gmail.com
github.com/Sk1pe1337 | [LinkedIn](#) | [GentryGuide Demo](#)

Profile

Junior AI / Backend Engineer with hands-on experience building LLM- and RAG-based applications in Python. Developed FastAPI backend services, document processing pipelines, embeddings and semantic search systems. During an internship at the Agency for Financial Monitoring of Kazakhstan, contributed to an AI system for searching and analysing regulatory documents: implemented PDF parsing, chunking, embeddings, retrieval and LLM integration. Built personal AI/ML and automation projects using PostgreSQL, ChromaDB, Scikit-learn, Playwright and Docker. Looking for a Junior AI Engineer, LLM Engineer or Python Backend Developer role.

Technical Skills

Programming	Python, JavaScript, SQL, C++
AI / ML	LLM, RAG, NLP, Prompt Engineering, Embeddings, Semantic Search, Vector Search, Transformers, Scikit-learn, Cosine Similarity
Backend	FastAPI, REST API, Node.js, Express.js, Laravel
Databases	PostgreSQL, SQLite, MySQL, MongoDB, ChromaDB, Qdrant
Document / AI	PDF Parsing, Text Chunking, Ollama, OpenAI API
Frontend	React, Next.js, HTML, CSS
Automation	Playwright, Web Scraping, aiogram
DevOps / Tools	Docker, Git, AWS
Languages	Kazakh — native; Russian — fluent; English — B2

Work Experience

Agency for Financial Monitoring of Kazakhstan (AFM) <i>AI / Backend Developer — Internship / Dual Education</i>	Dec 2025 — May 2026 Astana, Kazakhstan
- Built an AI system in Python and FastAPI for searching and analysing information within regulatory and legal documents. - Implemented a full document processing pipeline: PDF text extraction, data cleaning, chunking, and knowledge base preparation for RAG. - Developed embedding generation using <code>multilingual-e5-large</code> and semantic search based on cosine similarity. - Processed regulatory documents including the Criminal Code of Kazakhstan; a single ingestion run produced over 837 text chunks for retrieval. - Developed backend API endpoints for interaction between the application, LLM, and retrieval pipeline components. - Worked with SQLite and PostgreSQL; researched and integrated vector search and embedding storage components into the architecture. - Integrated a local LLM via Ollama API; contributed to query classification logic and context construction for model responses.	
Nazarbayev Intellectual School (NIS) <i>Backend Developer Intern</i>	2025 Astana, Kazakhstan
- Developed backend functionality on Laravel and Node.js for internal school management systems. - Built and integrated REST API endpoints for frontend–backend communication. - Implemented server-side business logic, data processing and validation. - Worked with databases and participated in integrating backend components into an existing web application. - Applied Git, clean code principles and collaborative development practices.	

Projects

GentryGuide — AI Fashion Assistant

Full-stack AI / RAG application

genrty-guide-noi9.vercel.app

Capstone / Diploma Project

- Built an AI assistant for personalised men's style recommendations based on user queries and a curated knowledge base.
- Implemented the full RAG pipeline: document processing → embeddings → vector search → context retrieval → LLM generation.
- Developed the backend on FastAPI and frontend on React; integrated PostgreSQL for app data and ChromaDB for vector search.
- Integrated GPT-4o via OpenAI API to generate answers grounded in retrieved context.

BLS Spain Visa Slot Monitor

Automation & monitoring system

github.com/Sk1pe1337/parcing

Personal Project

- Built a Python system for automated monitoring of visa appointment availability on the BLS Spain Kazakhstan portal.
- Implemented browser automation via Playwright; solved CAPTCHA bypass and cookie/session management challenges.
- Delivered real-time Telegram push notifications via aiogram; containerised with Docker for 24/7 VPS deployment.

ML Price Prediction

Machine Learning

Personal Project

- Trained a regression model to predict product prices using Python and Scikit-learn.
- Performed data preprocessing, feature engineering and cross-validation for model evaluation.

Electronic Menu

Full-stack Web Application

Personal Project

- Developed a digital restaurant menu app: REST API on Node.js / Express, MongoDB for data storage, React frontend.

Education

Astana IT University

Bachelor of Software Engineering — 6B06102

2023 — 2026

Astana, Kazakhstan

Aktobe College of Transport, Communications and New Technologies

Information Technology

2018 — 2022

Aktobe, Kazakhstan

Additional

Military Service: completed mandatory military service in the Armed Forces of the Republic of Kazakhstan.
